

Pairs

04 June 2022 06:32 PM

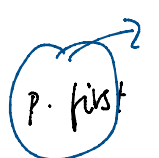

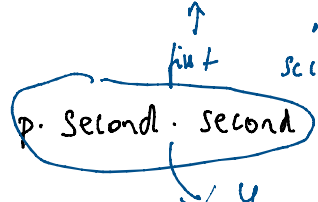

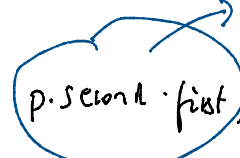

void pairs () {  in place of int there can be other datatype depends on its requirement.

pair <int, int> p = {1, 3}; // to store two integer

cout <<  << " " << ;

// to store more than 2 pair

pair <int, pair <int, int>> p = {1, {3, 4}} // 3 variables

cout <<  << " " <<  << " " << .

// to declare pairs of arrays

pair <int, int> arr[] = { {1, 2}, {2, 5}, {3, 1} }

0 1 2 → index

cout << arr[1].second; // 5
